**Residential
and Commercial
Security Shutter
Systems**

~ Shutters for all applications ~

ArmourBlind has developed a range of both **French Shutters** and **Roller Shutters** for:

- *External,*
- *Internal,*
- *Residential, or*
- *Commercial applications.*

The **French Shutter** range also includes:

- *Sliding systems.*
- *Hinged systems.*
- *Stacking (i.e. Sliding / Folding) systems.*
- *Static systems.*

All in All, the company currently has fourteen (14) different product variations available - which probably gives ArmourBlind the most extensive product range in this market segment in South Africa, if not globally?!

For more information, please have a look at their website at www.armourblind.co.za.

~ ROLLER Shutters ~

RSi ~ Roller Shutter with built-in "intelligence"

The RSi system is ArmourBlind's flagship product. It is fully automated and offers 100% functionality.

This patented product is the only shutter of its kind in the world. Not only can it roll up and down, you can ALSO adjust the slats!

If you want to sleep well at night - put this on your bedroom windows because being fully electronically controlled means that an auxiliary sensor (e.g. a beam or passive infrared) could be installed with the RSi so any breach of security could automatically close the shutter, in **lock-down mode**.

For more information, please have a look at the **online video** of the "RSi roller shutter" at www.armourblind.co.za; as this is something very exciting - and patented!

RS ~ Roller Shutter

The RS range is ArmourBlind's more traditional roller shutter. These systems are also automated, and the slats are inter-linked to provide a secure barrier.

This is an excellent product to install externally on all doors and windows for those "lock up & go" requirements... but it can also be used internally (for instance to separate and secure ones bedroom section from the rest of the house, or to shut off a stairway leading upstairs).

The electronic motor is controlled either by way of a wireless remote or a wired-in switch.

In the event of a power failure the RS is also capable of being opened by the home-owner using an override crank handle.

ISS ~ Internal Security Shutter

The ISS system is truly a fantastic product because it offers the same excellent functionality as the traditional “wooden plantation shutters” with the added benefit of offering high security.

The security aspect of ArmourBlind shutters is reinforced with metal rods inside the aluminium slats, so **aesthetic looks plus security** have been basis of this product’s design!

When the ISS shutters are closed the homeowner has further security in the knowledge that he/she can lock the slats **and** lock the panels (with a key) to prevent burglars from gaining easy access as they could do with wooden shutters.

The ISS offers fantastic “stacking” solutions internally, but as with the FXL and ADL options the ISS can also be mounted externally on sliding tracks, hinges etc.

ADL ~ Adjustable Louvre

Similar in many respects to the ISS, the ADL was also designed and developed for **aesthetic looks plus security**.

As with the ISS system security is taken seriously, the ADL also has a “built-in burglar bar” (i.e. metal rods in the slats).

Where the ISS louvers are adjustable with a ‘hand-tilt-rod’ the ADL requires the use of a ‘crank handle’ to adjust the louvers. This crank handle system ensures that the louvers can not be easily tampered with, or opened with prying fingers, from the outside...!

This shutter is best suited to external applications – e.g. sliding, hinged, or stacking (for instance on a veranda).

FXL ~ Fixed Louvre (non-adjustable)

The FXL has fixed (non-adjustable) louvers and so this product is best suited for external applications and sun filtering.

The FXL does not have metal rods in the slats so this shutter is not designed for very high security requirements, although its **aesthetic qualities** are certainly in line with ArmourBlind range of products.
